RWHAP Best Practices Compilation Purpose

We gather and share what works in the RWHAP.

targethiv.org/bestpractices

- Knowledge sharing across the RWHAP community is an important contribution to the ending the HIV epidemic in the United States.
- We systematically collect, catalog, and disseminate what works to improve HIV care and services.

Search & Share What Works

Search

HAB staff, the RWHAP community, recipients, and providers can easily search and identify approaches.

Share

Organizations can submit information about what has worked in their program to support replication by others.

Help the Compilation Grow!

- The Compilation launched in October 2021 with 20 profiles.
- We are currently reviewing materials on TargetHIV.org and rapidly developing profiles for existing approaches from previous HAB funded initiatives.

We are accepting submissions on all types of approaches!
