

Chart 1: Completeness Rates for Demographic Data Elements

ADAPs are continuing to submit very complete demographic data. All demographic data elements had over 95% completeness on the 2019 ADR.

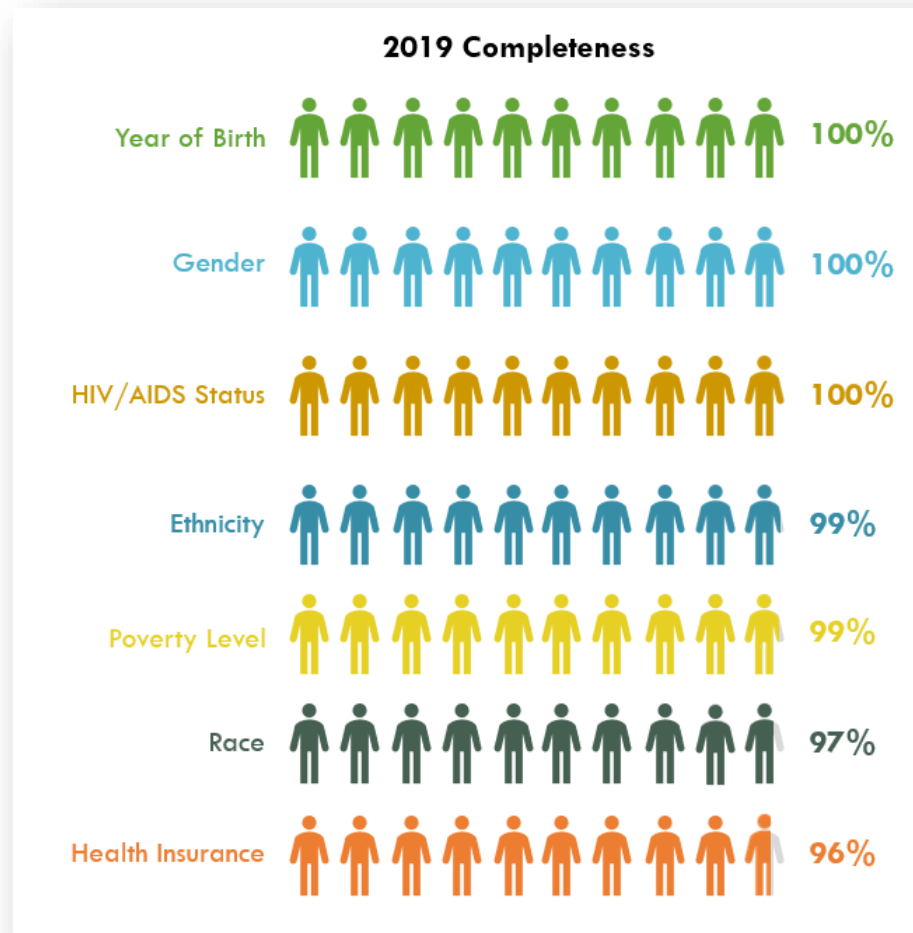

Chart 2: Completeness Rates for ADAP Services

Service data, including detailed medication data, are 100% or close to 100% complete. ADAPs reported all required service data except for 1% missing data each for amount of insurance assistance received and days supply of medication.

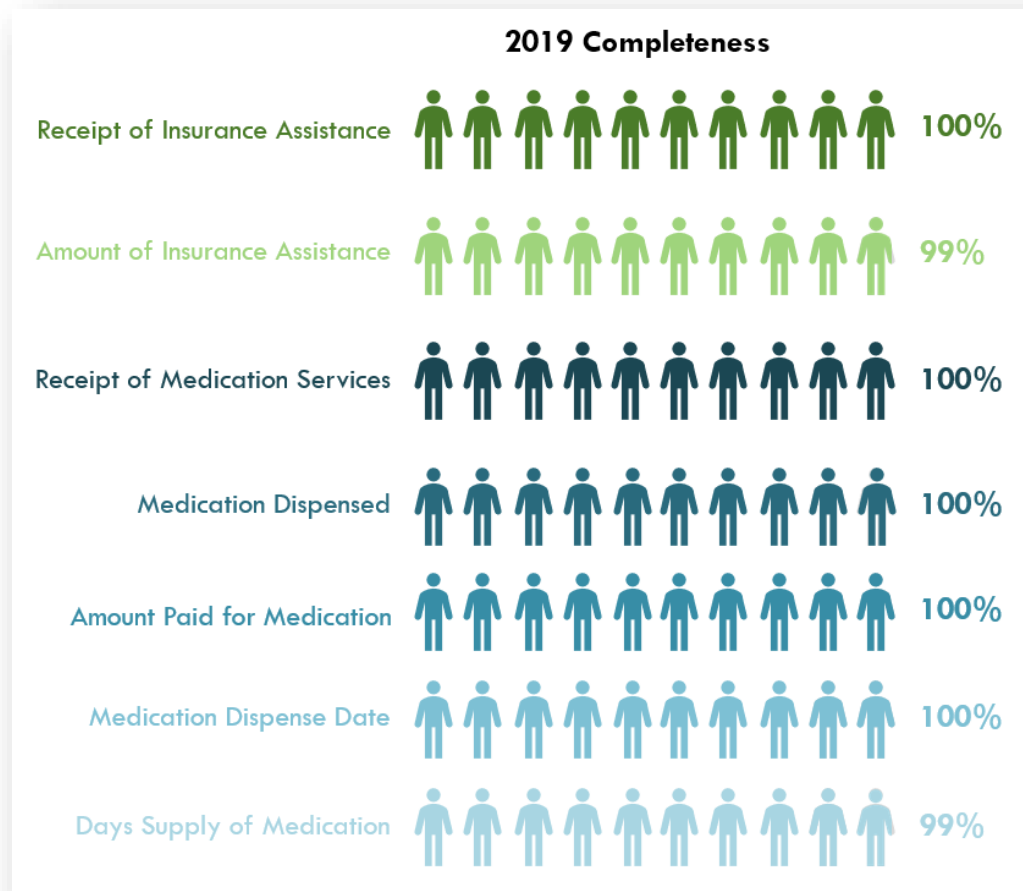

Chart 3: Improvements in Completeness Rates for Clinical Data

While ADAPs struggled the most with clinical information, clinical data reporting has been at or above 90% for viral load results since 2015. CD4 reporting has declined in that same period, largely due to changes in clinical practice where CD4 tests may not be ordered every year.
