

## Improving HIV Health Outcomes through the Coordination of Supportive Employment and Housing Services

### DEMONSTRATION SITE

University Health System Bexar County  
Hospital District | San Antonio, TX

#### GEOGRAPHIC LANDSCAPE

All partner agencies are located within a 10-mile radius of downtown San Antonio and are easily accessible via public transportation.

#### THE CHALLENGE

A comprehensive needs assessment revealed that a lack of education, employment and stable housing are barriers to client engagement healthcare. Only 10% of clients surveyed reported working full-time while 75% of survey respondents were unemployed, 7% worked part-time and 4% worked part-time while receiving disability.

#### FOCUS POPULATION

People living with HIV (PLWH) who are low-income, uninsured/underinsured and unstably housed and live in racial and ethnic minority communities in the four-county Transitional Grant Area (TGA). TGA counties consist of Bexar, Comal, Guadalupe, and Wilson.

#### THE MODEL

We will coordinate client services for six months and transition clients to the TGA's case management system after completion of program. Acuity scores will determine clients' case management paths.

#### PARTNERS

**Alamo Area Resource Center:** Health Education, Behavioral Health  
**Family-Focused AIDS Clinical Treatment Services:** Financial Assistance  
**San Antonio AIDS Foundation:** Transportation, Oral Health Care  
**BEATAIDS:** Case Management, Substance Abuse Counseling  
**CentroMed:** Behavioral Health, PrEP

#### IMPACTS

- **Impact 1:** Increase employment stability among clients and improve assistance with employment options
- **Impact 2:** Increase housing stability among clients and improve assistance with housing options
- **Impact 3:** Increase retention in HIV care and viral load suppression
